

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

Claims 1-30 (canceled)

Claims 31-44 (cancel)

Claim 45 (previously presented): A method comprising:  
assigning a different address to each of at least two agents on a client system of a  
multicast system; and

determining whether a message sent to a plurality of client systems of the multicast  
system and received by said client system is addressed to one of said at least two agents.

Claim 46 (previously presented): The method of claim 45 including receiving at least  
two different types of messages at said client system including a software update message and a  
short message service message.

Claim 47 (previously presented): The method of claim 46 including receiving  
messages including software and messages not including software.

Claim 48 (previously presented): The method of claim 47 including receiving  
different addresses with messages that include software and messages that do not include  
software.

Claim 49 (previously presented): The method of claim 48 further comprising  
determining if the messages including software are directed to an agent on the client system to  
handle the downloading of software based upon a service identifier associated with the agent.

Claim 50 (previously presented): The method of claim 45 further comprising  
determining whether a message is sent to a first client system of the multicast system or a subset  
of the plurality of client systems based upon an individual identifier of the first client system and  
a group identifier of the subset of the plurality of client systems.

Claim 51 (previously presented): A system comprising:  
a processor-based device including a first addressable agent and a second addressable  
agent, the processor-based device comprising a client system of a multicast network; and  
a storage coupled to said processor-based device storing instructions that enable the  
processor-based device to assign a different address to the first and second addressable agents

and determine whether a message sent to a plurality of client systems of the multicast network and received by said client system is addressed to one of the first and second addressable agents.

Claim 52 (previously presented): The system of claim 51 wherein the system further comprises a service acquisition module to receive a broadcast data stream and provide a program identifier to a tuner of the processor-based device, and to extract the message and to provide the message to a unidirectional messaging module of the processor-based device.

Claim 53 (previously presented): The system of claim 52 wherein the unidirectional messaging module is to determine if the message is addressed to the first addressable agent or the second addressable agent.

Claim 54 (previously presented): The system of claim 52 wherein the unidirectional messaging module to determine if the message is addressed to the first addressable agent or the second addressable agent based upon a service identifier within the message.

Claim 55 (previously presented): The system of claim 51 wherein the storage is to further store instructions that enable the processor-based device to determine whether a message is directed to a first client system of the multicast network or a subset of the plurality of client systems of the multicast network based upon an individual identifier of the first client system and a group identifier of the subset of the plurality of client systems.
